

Browser

Server

The JavaScript code instructs the browser to update the note list on the open HTML page and to send the added note to the server.

1: POST `https://studies.cs.helsinki.fi/exampleapp/new_note_spa`  
`{content: "Note content", date: "2021-04-12T06:27:22.986Z"}`

The server application saves the note sent by the browser.

1.1: 201 Created `{"message": "note created"}`
